WORK EXPERIENCE

Zycus Inc.

Manager (Development) – Integrations & AltGen (Agentic AI) Platform

Apr 2024 – Present

- Spearheaded development of the AltGen Framework – a proprietary no-code AI Agent Builder Platform.
 - Deployed agent implementations across eight enterprise use cases, including ANA (Autonomous Negotiation Agent), Intake Assistant, and Tail-Spend Automation Agents for PWC and other Fortune 500 companies.
 - Enabled non-technical users to create, train, and deploy intelligent agents through natural language workflows.
 - Designed conversational tool-creation capabilities allowing users to define APIs, data sources, and logic without coding—adopted organization-wide at Zycus, accelerating agent development and eliminating engineering dependency.
 - Introduced a modular agent-composition architecture in response to limitations of general-purpose frameworks (AutoGen, Flowise, Dialogflow) for enterprise workflows—enabling persona-based contextual switching and complex tool orchestration that differentiated AltGen in the market.
- Architected GenAI-powered Pipeline Agent platform democratizing integration development by enabling analysts to design, deploy, and monitor workflows through conversational AI—removing engineering dependencies and accelerating delivery cycles.

Tech Lead – Integrations Platform (iSaaS)

Apr 2022 – Mar 2024

- Led architecture and development initiatives for the iSaaS platform, ensuring scalability, extensibility, and alignment with enterprise-grade integration standards.
- Built the iSaaS Mapper platform—an AI-driven natural language mapping platform that automated transformation logic and reduced manual coding effort for engineering teams.
- Designed an intelligent UI-based ETL builder with guided orchestration, auto-validation, and reusable serialization patterns—enabling analysts to configure pipelines without deep engineering effort.
- Optimized large-scale enterprise data processing workflows, improving transformation accuracy, accelerating delivery timelines, and increasing efficiency for global clients.
- Acted as the technical authority during platform onboarding with customer engineering teams, guiding architecture alignment, security considerations, and successful production rollout for 20+ enterprise clients.

Senior Software Engineer – Integrations Platform (iSaaS)

Jul 2021 – Mar 2022

- Upgraded the platform to JDK 11, eliminating legacy technical debt and improving performance, system compatibility, and long-term maintainability.
- Designed and developed a one-click automated migration framework with validation, audit logging, and self-healing mechanisms—dramatically reducing manual intervention and accelerating deployment cycles.
- Led platform sustainment, roadmap delivery, and high-severity incident response, collaborating cross-functionally to drive feature evolution, reduce escalations, and improve overall platform reliability and user experience.

Razorpay

Senior Solutions Engineer - Integration

Jan 2021 – Jul 2021

- Enabled successful platform adoption for enterprise customers—including Google—by defining integration requirements, validating architecture, and ensuring secure and compliant implementation.
- Conceptualized and developed a drag-and-drop checkout configuration builder, enabling merchants to visually customize payment experiences and configure payment instruments—reducing onboarding effort and driving self-service adoption. Recognized with the 'Tesla Badge' award for high-impact delivery.
- Drove the engineering delivery of UPI Autopay, collaborating with product, platform engineering, and merchant teams to build scalable recurring payment flows aligned with ecosystem and compliance standards.

Zycus Inc.

Software Engineer – Integration

Jul 2018 – Jan 2021

- Developed a SnapLogic adapter and reusable cloud integration components, adopted by 70%+ customers and significantly accelerating integration delivery.
- Built automation frameworks to streamline development workflows, improving team productivity by 25% and reducing recurring engineering effort.
- Contributed to core platform enhancements focused on scalability, extensibility, and improved integration configurability. Played a key role in driving SnapLogic adoption across the organization and was awarded the Overall Achievement Award for high-impact contribution.

EDUCATION

D.Y.Patil College of Engineering - Bachelor of Engineering, (Information Technology) - 2014-2018

Pune, India

Skills

Agentic AI, LLMs, RAG, NLP | Integration Architecture, ETL Pipelines, SnapLogic | Java, Python, Spring Boot, Docker, Kubernetes, CI/CD, Microservices
